Expand Your Automation Footprint with Encapture

Supercharge your enterprise automation strategy with our intelligent document processing (IDP) platform.

Why Encapture IDP?

Encapture allows you to extend automation across departments to ensure connectivity—automating document-intensive process reviews, eliminating manual data entry, reducing compliance risks, and accelerating business workflows.

How It Works

1. Collect and validate
2. Extract meaningful data
3. Review exceptions
4. Integrate and reconcile

AI–Powered Document Intelligence

- Automate the ingestion of documents from email, scanners, line of business (LOB) systems, and portals.
- Automate the splitting and indexing of documents and deliver to the long term-image repository (e.g., blob PDFs, scans, and images).
- Extract and validate data from structured and unstructured documents to ensure data integrity.
- Leverage real-time comparison logic across document types and systems (e.g., LOS, core, ECM, or LAR).

Machine Learning–Driven Automation

- Automate exception detection (e.g., missing signatures, notary stamps, and invalid counties).
- Train custom models to recognize internal forms and workflows unique to your institution.

Real–Time Dashboards & Exception Queues

- Visual UI flags issues for human review.
- Track audit statuses (e.g., pass / fail / issues).
- Drill down to document-level mismatches.

Support Your Full Document Lifecycle

Unlike point solutions, Encapture is designed to provide an end-to-end platform for your enterprise's document processing needs by combining next-gen machine learning, pre-built libraries, and easy-to-configure workflows.

Getting Started

Encapture has developed solutions for your most critical front-line operations:

Auto Lending
Streamline your auto loan process with fully automated document classification, verification, and data extraction—reducing operational costs and enhancing compliance.

Mortgage
Speed up loan turn times and improve the borrower experience with real-time document validation. Automate error detection, sync your LOS, and eliminate stare-and-compare processes to accelerate underwriting and post-closing.

Compliance
Reduce compliance costs and future-proof your data processes with AI-driven automation for CRA, HMDA, and 1071 by eliminating manual data scrubbing and ensuring accurate reporting.

Flexible Integrations

Core	LOS	ECM
Jack Henry, FIS, Fiserv, and Corelation	Abrigo, Baker Hill, MeridianLink, nCino, Encompass, and FIS Originate	Encompass OnBase, Director, Nautilus, Synergy, Image Centre, and Salesforce

And many more! Speak with one of our automation experts to learn more.
